Kitchen talk: three questions for dinner

For your parent or guide

QUESTION 1

If we cooked for twice as many people tonight, what would change, and what would stay the same?

QUESTION 2

Our recipe feeds 4. Your cousins are coming, so we are 6. How much rice do we need? How do you know?

QUESTION 3

What's one thing in this kitchen you could NOT scale by multiplying? (Cooking time is a good one to argue about.)

Tip: let your child do the measuring. Ask "how do you know?" and wait. No need to give the answer.
