Answers

#	Answer	Common mistake
1	16 chapati; 9 cups; 40 chapati	Adding: 3 → 6 is +3, so writing 11 chapati
2	5 kg (60 ÷ 24 = 2.5 batches × 2 kg)	Writing 38 kg by adding 36
3	15 cups of water (×3)	Writing 9 cups by adding 4 to both
4	She added 2 to both. 6 eggs make 18 pancakes (×1.5).	Accepting 14 because "the gap stays the same"
5	1,500 ml water; 5 onions (×2.5)	Rounding onions before finishing the ratio
6	Answers vary: check both ingredients use the same multiplier	Scaling only one ingredient

Challenge

× 2.5. 3 × 2.5 = 7.5 and 8 × 2.5 = 20. The same number turns both rows.

Reading the mistakes

ADDITIVE REASONING

Adds the same amount to both quantities. The most common misconception for ratios at this age. Fix it with counter-examples on small numbers she trusts.

ONE-INGREDIENT SCALING

Multiplies the main ingredient and forgets the rest. Fix it by listing every ingredient in a column of the table.

ROUNDING TOO EARLY

Rounds 2.5 batches to 3 before multiplying. Fix it with half-batches she can picture.

Evidence for the learner model: a right answer with a wrong reason is logged as "not yet shown". Ask for the reason every time.
