Guide notes: unit rates in daily life

For your parent or guide · 1 page

Why it matters

Unit rates turn messy comparisons into fair ones: price per kilo, kilometres per hour, millimetres of rain per day.

Everyday prompts

- At the shop: “2 kg of sugar for 300 shillings or 5 kg for 700. Which is cheaper per kilo?”
- On a matatu ride: “We went 12 km in 30 minutes. How far in one hour?”
- With airtime: “500 shillings for 2 GB, or 1,000 for 5 GB. Price per GB?”

What to listen for

- Does she say the unit (“per day”, “per kilo”)?
- Does she divide the right way round?
- Can she go back from the rate to the total?

Answers to the shop question: 150 and 140 shillings a kilo. The bigger bag wins, just.
