Ratio tables practice

6 problems · 2 pages

Name _____ Date _____

Remember: whatever you do to one row, do to the other. Multiply or divide both rows by the same number. Never add the same number to both.

1 A recipe uses 3 cups of flour for 8 chapati. Complete the table.

Cups of flour	3	6		15
Chapati	8		24	

2 Grace uses 2 kg of flour for 24 rolls. How much flour for 60 rolls? Show it in a ratio table.

3 Juice: 2 cups of squash to 5 cups of water. With 6 cups of squash, how much water?

Squash	2		6
Water	5		

4 Amani says: "4 eggs for 12 pancakes, so 6 eggs for 14 pancakes." What did she do? What is the right number of pancakes?

5 A soup for 4 people needs 600 ml of water and 2 onions. Scale it for 10 people.

People	4	10
Water (ml)	600	
Onions	2	

6 Write your own recipe with two ingredients. Scale it up for a party of 30.

Challenge

★ A ratio table has 3 → 8 in the first column and 7.5 → 20 in another. What single number turns the first column into the second? How do you know?

How did it go?

☐ I can explain why adding the difference doesn't work.

☐ I can scale a recipe up and down.

☐ I can check my answer makes sense in the kitchen.
